

## “The Good Neighbour app” Coronavirus health monitor

Cvm-Health™ is an easy to use web-based software application that provides a secure way to record health conditions, COVID-19 symptoms, vital signs and medications during the pandemic.

The app is free to anyone in the UK, and provides a secure way for individuals and families, sick or well, to monitor and support the management of their health for any COVID-19 related symptoms.

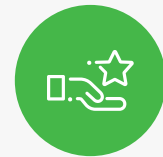

The app also enables individuals to ‘be a good neighbour’ by helping remotely monitor and care for members of their family or community who are at risk from Coronavirus.

Record your health conditions, symptoms, vital signs and medications

The app does not record your location or track you in any way. Your personal information is not shared with anyone

Create health diaries for people without access to the internet

Those registering to use the app must be over 18 but once registered the app can be used to monitor anyone’s health, regardless of their age. For example, a parent can monitor their children’s health.

### Build a community. Help fight COVID-19.

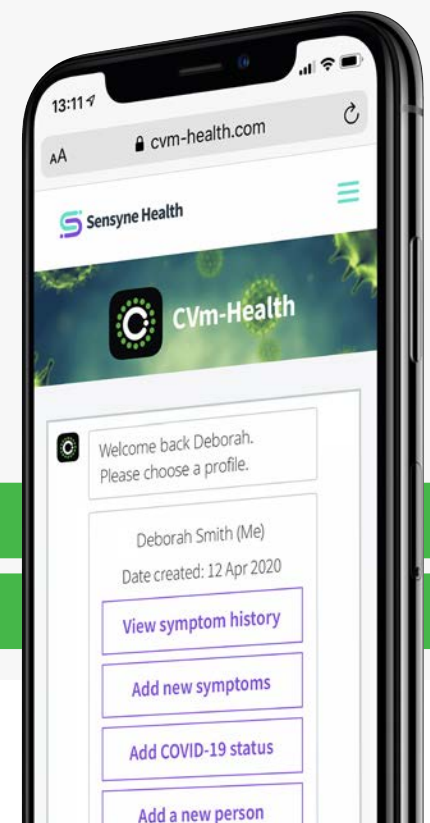

Help build a community to fight COVID-19, be a ‘good neighbour’ for people with poor technology literacy or with no access to the internet.

Serve your community by remotely caring for those that will remain at risk, isolated and locked-down after general social distancing guidance is relaxed.

The Office of National Statistics has reported that 11.3 million people in the UK lack the basic digital skills needed to use the internet effectively, while 4.8 million people never go online at all.

## CVm-Health is aimed at:

Anyone, sick or well, who wishes to monitor their own health.

Parents who would like to monitor their children's health.

Individuals\* who would like to help a family member, loved one or neighbour monitor their health during the pandemic.

\*Users must be aged 18 years or over.

## Features

- Record vital sign data (temperature, blood pressure, blood oxygenation and pulse)
- Record symptoms (cough, fever, shortness of breath, reduced activity levels, fatigue, loss of smell/taste)
- Record coronavirus status (as assessed by a clinical test)
- Record relevant risk factors and comorbidities
- View the most recent vital signs and symptoms information

## Benefits

### Accessible

Free, easy to use, accessible across all devices (mobile, tablet, laptop, PC).

### Aids remote health monitoring

Creates a personalised digital health record for those in most need of care, based on the vital signs data and symptom information recorded in the app.

### Supports your community and local healthcare

Enables individuals to monitor the health of those who are not able to use technology and rely on direct healthcare support.

### Increases social togetherness

Helps to provide reassurance to the most isolated and vulnerable members of society who may not have access to digital health technologies.

### Supports medical research for public good

With the consent of users, data generated by the application will be anonymised and made available for medical research into the prevention, diagnosis and treatment of COVID-19. Individuals have the option to opt out of sharing their data.

### Secure

Does not record an individual's location or track people in any way. All personal data is anonymised, securely stored on the cloud as a completely isolated instance with rigorous data security and privacy measures.

## Our expertise

CVm-Health builds on Sensyne's existing experience in developing validated remote patient monitoring applications such as its award-winning diabetes in pregnancy app GDM-Health™ and the vital signs monitoring system, SEND™.

The use of CVm-Health is subject to terms and conditions and support for the app is currently restricted to UK users only.
